Get Started with Splunk

- ✓ Saving time and money
- ✓ In a short timeframe a solid foundation for the future
- ✓ Transfer of knowledge and knowhow

The possibilities with Splunk are endless, after installation you can start immediately. But do you know exactly what you want to achieve? How do you implement the use cases in Splunk? Do you have the time and manpower available on such short notice? Above all you do not want to re-invent the wheel. Our Get Started with Splunk service gives you a kickstart!

Within a few days we create extensive reports and clear dashboards in Splunk. We provide a solid foundation to build on in the future. During the intake we collect the requirements and what business goals you want to achieve.

Next, a SMT-specialist will get to work and go through the various steps to reach the desired final result. The Splunk software is installed with a few Splunk apps that support the set goals. Then we connect the data sources and make sure these are indexed correctly. The installations are executed based on best practices the SMT-consultants collected in recent years. Everything is strictly monitored and the first results will be shared immediately. The obtained information is presented in clear dashboards. Also reports and/or alerts are created to share the information with colleagues from other departments.

Through knowledge transfer and executing the work, a solid foundation is laid for a proper integration of Splunk. The entire track takes five days with as final result an installed Splunk deployment with connected data sources and dashboards showcasing the value-add from this data. For any following projects, this environment can be expanded accordingly.
